# MATLAB-Python-Julia cheatsheet ¶

**Dependencies and Setup** 

**Creating Vectors** 

**Creating Matrices** 

**Manipulating Vectors and Matrices** 

Accessing Vector/Matrix Elements

**Mathematical Operations** 

Sum / max / min

**Programming** 

### Dependencies and Setup¶

In the Python code we assume that you have already run import numpy as np

In the Julia, we assume you are using **v1.0.2 or later** with Compat **v1.3.0 or later** and have run using LinearAlgebra, Statistics, Compat

### Creating Vectors¶

MATLAB	PYTHON	JULIA

# Row vector: size (1, n)

$$A = [1 \ 2 \ 3]$$

$$A = \begin{bmatrix} 1 & 2 & 3 \end{bmatrix}$$

# Column vector: size (n, 1)

$$A = [1; 2; 3]$$

$$A = [1 \ 2 \ 3]'$$

# 1d array: size (n, )

Not possible

$$A = np. array([1, 2, 3])$$

$$A = [1; 2; 3]$$

or

$$A = [1, 2, 3]$$

# Integers from j to n with step size k

$$A = j:k:n$$

$$A = np. arange(j, n+1, k)$$

$$A = j:k:n$$

# Linearly spaced vector of k points

$$A = 1 inspace(1, 5, k)$$

$$A = np. linspace(1, 5, k)$$

# **Creating Matrices**¶

**MATLAB** 

**PYTHON** 

JULIA

# Create a matrix

$$A = [1 \ 2; \ 3 \ 4]$$

# 2 x 2 matrix of zeros

$$A = zeros(2, 2)$$

$$A = np. zeros((2, 2))$$

$$A = zeros(2, 2)$$

### 2 x 2 matrix of ones

$$A = ones(2, 2)$$

$$A = np.ones((2, 2))$$

$$A = ones(2, 2)$$

# 2 x 2 identity matrix

$$A = eye(2, 2)$$

### **Diagonal matrix**

$$A = diag([1 \ 2 \ 3])$$

#### **Uniform random numbers**

$$A = rand(2, 2)$$

$$A = np. random. rand(2, 2)$$

$$A = rand(2, 2)$$

### **Normal random numbers**

$$A = randn(2, 2)$$

$$A = randn(2, 2)$$

### **Sparse Matrices**

$$A = sparse(2, 2)$$
  
 $A(1, 2) = 4$ 

$$A(1, 2) - 4$$

$$A(2, 2) = 1$$

[1, 1])),

# **Tridiagonal Matrices**

```
import sp. sparse as sp
diagonals = [[4, 5, 6, 7],
[1, 2, 3], [8, 9, 10]]
sp. diags(diagonals, [0, -1,
2]). toarray()
```

```
x = [1, 2, 3]
y = [4, 5, 6, 7]
z = [8, 9, 10]
Tridiagonal(x, y, z)
```

# Manipulating Vectors and Matrices¶

MATLAB

**PYTHON** 

JULIA

# Transpose

A. '

А. Т

transpose(A)

# **Complex conjugate transpose (Adjoint)**

A'

A. conj()

,

# **Concatenate horizontally**

 $A = [[1 \ 2] \ [1 \ 2]]$ 

B = np.array([1, 2]) A = np.hstack((B, B))  $A = \begin{bmatrix} \begin{bmatrix} 1 & 2 \end{bmatrix} & \begin{bmatrix} 1 & 2 \end{bmatrix} \end{bmatrix}$ 

or

A = horzcat([1 2], [1 2])

or

A = hcat([1 2], [1 2])

# **Concatenate vertically**

 $A = [[1 \ 2]; [1 \ 2]]$ 

B = np.array([1, 2]) A = np.vstack((B, B))  $A = [[1 \ 2]; [1 \ 2]]$ 

or

A = vertcat([1 2], [1 2])

or

A = vcat([1 2], [1 2])

MATLAB	PYTHON	JULIA
Reshape (to 5 rows, 2 columns)		
A = reshape(1:10, 5, 2)	A = A. reshape(5, 2)	A = reshape(1:10, 5, 2)
Convert matrix to vector		
A(:)	A = A.flatten()	[A[:]
Flip left/right		
fliplr(A)	np.fliplr(A)	reverse(A, dims = 2)
Flip up/down		
flipud(A)	np. flipud(A)	reverse(A, dims = 1)
Repeat matrix (3 times in the row di	mension, 4 times in the column dime	nsion)
repmat(A, 3, 4)	np.tile(A, (4, 3))	repeat(A, 3, 4)
Preallocating/Similar		
x = rand(10) y = zeros(size(x, 1), size(x, 2)) N/A similar type	<pre>x = np. random. rand(3, 3) y = np. empty_like(x)  # new dims y = np. empty((2, 3))</pre>	<pre>x = rand(3, 3) y = similar(x) # new dims y = similar(x, 2, 2)</pre>

MATLAB	PYTHON	JULIA

# Broadcast a function over a collection/matrix/vector

```
f = @(x) x.^2
g = @(x, y) x + 2 + y.^2
x = 1:10
y = 2:11
f(x)
g(x, y)
```

Functions broadcast directly

```
def f(x):
    return x**2
def g(x, y):
    return x + 2 + y**2
x = np.arange(1, 10, 1)
y = np.arange(2, 11, 1)
f(x)
g(x, y)
```

Functions broadcast directly

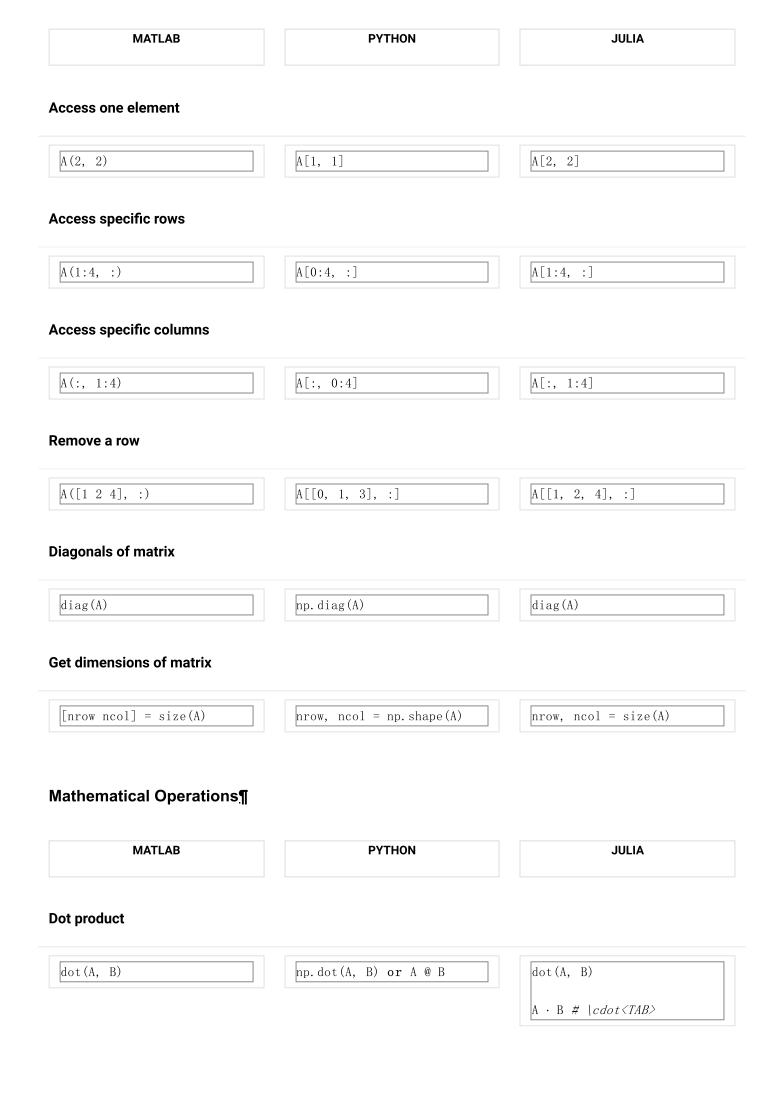

```
f(x) = x^2
g(x, y) = x + 2 + y^2
x = 1:10
y = 2:11
f(x)
g(x, y)
```

# Accessing Vector/Matrix Elements¶

MATLAB

**PYTHON** 

JULIA

MATLAB	PYTHON	JULIA
Matrix multiplication		
A * B	A @ B	A * B
Inplace matrix multiplication		
Not possible	<pre>x = np. array([1, 2]).reshape(2, 1) A = np. array(([1, 2], [3, 4])) y = np. empty_like(x) np. matmul(A, x, y)</pre>	x = [1, 2] A = [1 2; 3 4] y = similar(x) mul!(y, A, x)
Element-wise multiplication		
A .* B	A * B	A .* B
Matrix to a power		
A^2	np.linalg.matrix_power(A, 2)	A^2
Matrix to a power, elementwise		
A. ^2	A**2	A. ^2
Inverse		
inv(A)	np.linalg.inv(A)	inv(A)
or		or
A^(-1)		A^ (-1)
Determinant		
det(A)	np.linalg.det(A)	det(A)

MATLAB	PYTHON	JULIA
Eigenvalues and eigenvectors		
[vec, val] = eig(A)	val, vec = np.linalg.eig(A)	val, vec = eigen(A)
Euclidean norm		
norm(A)	np.linalg.norm(A)	norm(A)
Solve linear system $Ax=b$ (when $A$ is square)		
A\b	np.linalg.solve(A, b)	A\b
Solve least squares problem $Ax = $	=b (when $A$ is rectangular)	
A\b	np.linalg.lstsq(A, b)	A\b
Sum / max / min¶		
MATLAB	PYTHON	JULIA

MATLAB PYTHON JULIA

# Sum / max / min of each column

sum(A, 1) max(A, [], 1) min(A, [], 1) sum(A, 0)
np.amax(A, 0)
np.amin(A, 0)

sum(A, dims = 1)
maximum(A, dims = 1)
minimum(A, dims = 1)

### Sum / max / min of each row

sum(A, 2) max(A, [], 2) min(A, [], 2)

sum(A, 1)
np.amax(A, 1)
np.amin(A, 1)

sum(A, dims = 2)
maximum(A, dims = 2)
minimum(A, dims = 2)

#### Sum / max / min of entire matrix

sum(A(:))
max(A(:))
min(A(:))

np. sum(A)
np. amax(A)
np. amin(A)

sum(A)
maximum(A)
minimum(A)

# Cumulative sum / max / min by row

cumsum(A, 1)
cummax(A, 1)
cummin(A, 1)

np.cumsum(A, 0)
np.maximum.accumulate(A, 0)
np.minimum.accumulate(A, 0)

cumsum(A, dims = 1)
accumulate(max, A, dims =
1)
accumulate(min, A, dims =
1)

# Cumulative sum / max / min by column

cumsum(A, 2)
cummax(A, 2)
cummin(A, 2)

np.cumsum(A, 1)
np.maximum.accumulate(A, 1)
np.minimum.accumulate(A, 1)

cumsum(A, dims = 2)
accumulate(max, A, dims =
2)
accumulate(min, A, dims =
2)

# ${\bf Programming} \underline{\P}$

**MATLAB** 

**PYTHON**

### Print text and variable

x = 10

 $|fprintf('x = %d \n', x)|$ 

 $|_{\rm X} = 10$ 

 $print(f'x = \{x\}')$ 

 $|_{X} = 10$ 

println("x = \$x")

# **Function: anonymous**

$$f = @(x) x^2$$

$$f = 1ambda x: x**2$$

$$f = x \rightarrow x^2$$
# can be rebound

#### **Function**

```
function f(x)
  return x^2
end

f(x) = x^2 # not anon!
```

# **Tuples**

Can use cells but watch performance

# Named Tuples/ Anonymous Structures

```
from collections import
namedtuple

mdef = namedtuple('m', 'x
y')
m = mdef(1, 2)

m. x
```

### **Closures**

$$a = 2.0$$
 $f(x) = a + x$ 
 $f(1.0)$ 

MATLAB	PYTHON	JULIA

# **Inplace Modification**

```
function f(out, x)
    out = x.^2
end
x = rand(10)
y = zeros(length(x), 1)
f(y, x)
```

```
def f(x):
    x **=2
    return

x = np. random. rand(10)
f(x)
```

```
function f!(out, x)
    out .= x.^2
end
x = rand(10)
y = similar(x)
f!(y, x)
```
